DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 and 18, it is not clear what constitutes a main group halide and mixed metal-main group halides. Clarification is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1714

5. Claims 1, 6-11, 18 and 22-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Coleman.

Coleman teaches the decomposition of benzazide (organic azide) using halides catalysts such as FeCl_3 , GaCl_3 , AlCl_3 (see abstract in its entirety).

Accordingly, Coleman teaching all of the limitations of the claims anticipates the claims.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 12, 15, 16, 28, 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coleman.

Coleman has been discussed above. Coleman teaches the limitations of the claims other than the differences that are discussed below.

In the first aspect, Coleman differs from the claims in that he does not specifically teach that a combination of catalysts is used (claims 12, 16, 28 and 32). However, it is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose. The idea of combining them flows logically from their having been individually taught in the prior art." In re Kerkhoven, 626 F.2d 846, 850,

205 USPQ 1069, 1072 (CCPA 1980).

In the second aspect, Coleman differs from the claims in that he does not specifically teach that the catalyst is granular (claims 15, 16, 31 and 32). However, no unobviousness is seen in this difference because the catalyst of the prior art performs the same function. Therefore, the claimed granular catalyst is not patentable distinct from the prior art catalyst.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior is cited for teaching the general state of the art.
